kandy, Central Province, Sri Lanka

Summary

Passionate and driven undergraduate at Staffordshire University pursuing a BSc in Computer Science. Recently promoted to Associate DevOps & Cloud Engineer at Infinitum360 (Pvt) LTD, after starting as a DevOps Intern, where I've been expanding my expertise in cloud computing, automation, and CI/CD.Eager to leverage my education and industry experience to contribute to innovative projects across software development, cybersecurity, and cloud engineering. With a strong interest in the intersections of technology, business, and operational efficiency, I'm committed to continuous learning and growth.Excited to collaborate with like-minded professionals to shape the future of technology and deliver impactful solutions.

_____

Experience

Infinitum360 (Pvt) Ltd
7 months

Associate DevOps and Cloud Engineer
October 2025 - Present (3 months)
Colombo

• Led the Helpdesk team, overseeing day-to-day operations, managing team members, and ensuring efficient resolution of technical issues.

• Handled ticket management and issue tracking, maintaining service quality, response times, and customer satisfaction.

• Designed, implemented, and introduced new helpdesk workflows, including structured issue escalation processes to improve operational efficiency and accountability.

• Contributed to R&D initiatives, including a face recognition system using RTSP video streams and raw camera footage, developed with Python and the FaceMe SDK.

Intern DevOps Engineer
June 2025 - October 2025 (5 months)
Colombo

• Designed and implemented new CI/CD pipelines and restructured existing ones to support Android application builds. Successfully reduced build times by 60% and optimized resource usage, leading to 60% cost savings.

• Maintained and managed release processes for Google Play Store and Apple App Store, ensuring timely updates, smooth deployment workflows, and compliance with platform requirements.

• Conducted extensive R&D on monitoring solutions, building dashboards in Grafana integrated with AWS ECS, EC2, CloudWatch, Loki, Prometheus, FireLens, and FluentBit for real-time system insights.

• Developed and configured alerting systems within Grafana to detect performance anomalies, high resource utilization, and service breakdowns, enabling faster incident response and improved system reliability.

• Researched and implemented a multi-tenant access control system using AWS OpenSearch with MongoDB, NestJS, and JWT authentication, ensuring secure data isolation and controlled access across different tenants.
